

FLYRAL

Dipper attractant bait for use as an additive for insecticide broths

What is it? And what is it for?

Flyral® is a formula based on hydrolysed proteins. This product acts as a trophic attractant of adult diptera (flies and mosquitoes) and serves as a base material for mixing with insecticides authorized in the preparation of insecticidal baits.

Benefits

- High compatibility with insecticide.
- Effective attractant of adult diptera.
- Authorized for use in organic farming in the EU.
- Authorized for use in agriculture according to the NOP regulation.
