

Inicium®

Activators of stress proteins related to transplantation

What is it? And what is it for?

Inicium® is a totally new product based on peptides characterized by low molecular weight, with high root activity. The characterized peptides of low molecular weight in the composition of Inicium® act as activators of stress proteins related to transplantation.

Benefits:

- Develops a powerful root system (root and hair absorbent)
- Helps to overcome plant stress at the time of transplant
- Advance the evolution of the initial states
- It is a totally natural product, free of hormones

Data sheet

Crops:

Inicium® can be applied to all types of crops: leaf horticulture, fruit horticulture, strawberry, stone fruit, pip fruit, citrus, olive, vine or grapefruit, tropical, etc.

Dose:

Perform the applications through localized irrigation or by spraying, ensuring the contact of the liquid with the root zone.

Crops:

- Horticultural:
 - In the nursery, make 1 to 3 applications of 6-10 mL / L of water from the cotyledon outlet.
 - In transplant: perform 2 applications, the first in the risk of transplant and the second one a week later, at a dose of 10-15 L / ha.
- Tree crops:
 - Plant (nursery): 20 mL / foot divided into 2 applications at the start of the activity
 - Young tree (production start): 40-80 mL / foot divided into 2 applications at the beginning of the activity
 - Adult tree (full production): 60-120 mL / foot divided into 2 applications, when the activity begins or at times where it is necessary to recover mass and root activity

Moment of application:

It is recommended to apply in the nursery, at the time of transplanting, in young tree plantations and in adult plants that present radicular problems.

Composition:

Organic Matter 40% (w / w)

Nitrogen (N) total 5.5% (w / w)

Nitrogen (N) organic 4% (w / w)

Phosphorus (P2O5) 5.5% (w / w)
