

What is it? And what is it for?

Suzukii Trap® is a specific food attractant for the capture of *Drosophila suzukii* composed of peptides and organic acids with a high attractive power. It is a 100% ecological solution that does not need any insecticide, neither in the formulation itself nor in its subsequent use in the field. The effectiveness of the system is guaranteed as long as there is an attractant in liquid form. The durability of this can vary depending on the time of year and local weather.

Benefits

- Product ready for use.
- Does not leave waste in the Fruits.
- Usable product in Ecological Agriculture.
- It does not contain pheromones or insecticide in its composition or in its form of use.

Data Sheet

Crops

The main crops affected by *Drosophila suzukii* are mainly soft fruits: Cherries, Strawberries, Plums, Berries, Figs, Grapes ... In addition to wild berries that serve as a reservoir when there is no susceptible crop.

How to Use

Arrange the attractant in fly traps or traps suitable for catching fruit flies. The traps should be hung at the level of the crop, at least 25 cm from the ground. It is advisable to keep them as a monitoring throughout the year, since the adult form of this pest can survive in winter conditions. During the winter, place the traps reinforcing the perimeters of the plot and the most humid areas.

Composition

- Hydrolyzed proteins: 2% p/p
- Organic acids: 5% p/p
- Density: 1.02 g/mL
